

PROFILE

Wakke is a small nation without any quantum capability. It is strongly affected by the impacts of global challenges like poverty, pollution, and climate change. The country has an agrarian and manufacturing economy and ultimately ends up being a critical provider of goods to its richer neighbours. It is also considered to be a labour-farm, with considerable migration of workers to countries with stronger economies.

Lauze provides significant amounts of foreign aid to Wakke and has requested that representatives of the country be invited to attend the symposium. However, the government of Wakke is conscious that it needs to set out its own path and doesn't want to be overly dependent on others. To that end, the government has been investing in education to grow its talent, including full scholarships for high-performing students to attend overseas universities as long as they return to Wakke and spend at least ten years contributing to the local economy.
